

Thresholds of Reality: Creating Coherent Enchantment in AR

Janet H. Murray

Georgia Tech

@janetmurray

Enchantment

Sense of dwelling in an augmented space adjacent to the real world where contrary-to-reality things – things that we wish for or fear in real life – fill our senses, and we are given contrary-to-reality powers to create effortless transformations.

Media are intrinsically magical

we **expect** enchantment in AR

we experience enchantment...

...from the sheer novelty of AR

But novelty wears off

leaving us disappointed

To deliver on the promise of
enchantment we need
a new medium not just
a new headset

Mature media need:

Stable Platforms
reliable inscription
standardized transmission

Shared Systems of Representation
formats
genres
conventions

Is AR *potentially* a new medium?

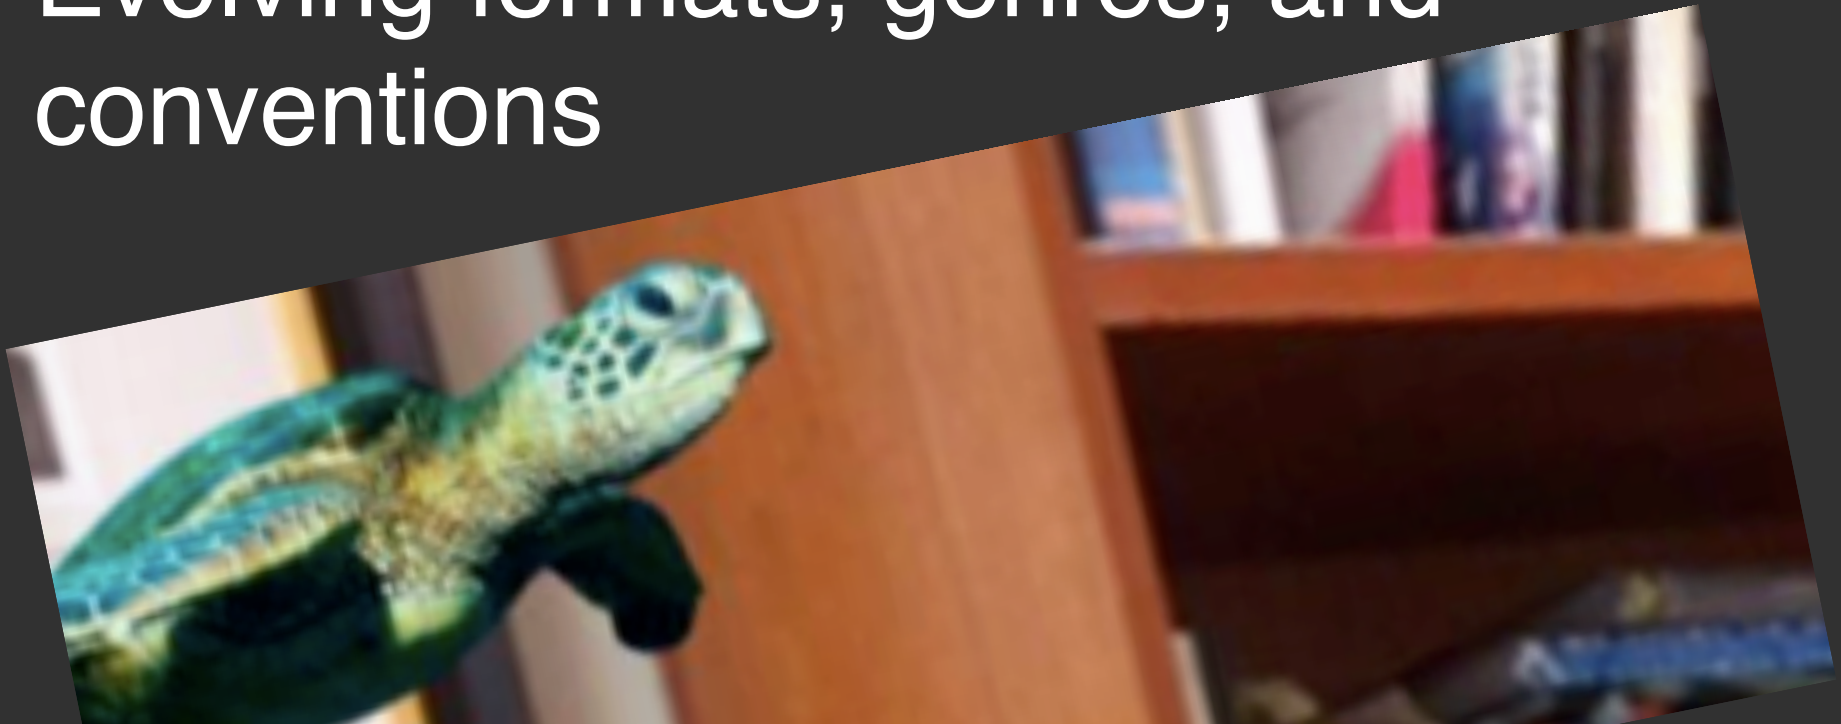

Yes! ... but not yet

No stable platform

Evolving formats, genres, and
conventions

Demo Videos Promise Enchantment

HoloLens
“Fragments”

Designing beyond the affordances of the platform

*Sized to the
platform of mobile
viewer*

Pokemon Go

Coherent interaction → enchantment

Familiar collection game mechanic maps onto familiar camera functionality (agency)

Geolocation exploits spatial affordance, seems encyclopedic (immersion)

Relying on novelty and jump scare

RoboRaid

*Sized to the platform of
the HoloLens*

RoboRaid

- Suits the viewing & the hand action constraints
- Direct manipulation mechanic reinforces presence
- Rapid, frequent feedback to point and shoot
- Clearly unreal adversaries do not raise expectations of behavior
- Robots bursting through wall is a playful metaphor for AR itself

Young Conker

*Translation of
platform scroller mechanics*

*Necessary and useful
preliminary exploration of
mapping real space*

Mostly novelty value

Strategies that undermine immersion

- Placing narrative action in the past
- Cutting between virtual places without the interactor's movement
- Using recorded video cut scenes
- Introducing characters or objects that suggest actions that are not possible (like talking, grabbing, gaming)
- **Assuming that virtual presence is satisfying in itself**

Strategies to create **dramatic agency** in narrative AR

- Intrusion into reality of magical/alien/ghostly beings
- Collection/revelation by camera-like action
- Discovery of something virtual hidden behind something actual
- Chasing something small and elusive
- Luring something small and shy by moving something real or virtual

Longing for the Holodeck

The Holodeck is
a misleading
goal

Jumieges3D - Time travel in a French Monastery

Incoherence in location-based informational AR

1. Too much focus on the mobile AR screen at the expense of the historical or natural site
2. Too much distraction from AR experience from liveliness of the actual world
3. Too literal replication of legacy media formats – audio tours, pamphlets of text – with too little interaction

Location-based AR design

- **Blended experience** with close sync between real and virtual overlay
- Multiple granularities of augmentations, all tightly mapped to physical space
- Call attention to spatial details, entice closer view, contextual view, multiple POVs, time sliders

How to watch any AR demo

Is it blowing your mind using jump scares, children, or animals?

Does it avoid showing how the platform is actually operated by the interactor?

How to watch any AR demo

Does it assume 24 hour surveillance is a good thing?

Does it promise to read the thoughts of the people around you using AI and Big Data?

If so, it is probably relying on the enchantment of novelty.

The collective
invention of a new
medium can
expand
human
understanding

Enchantment!

...from coherent
interaction design!

Thank you!
